

Ashish Anand

Node.js Back-end Developer — Full-Stack Engineer

ashishanand8824@gmail.com — github.com/ashish8824 — linkedin.com/in/ashish-anand-146518217
+91-7461862176 — Bengaluru, Karnataka, India

PROFESSIONAL SUMMARY

Backend-focused software engineer with strong expertise in Node.js, Express, MongoDB, and real-time systems. Experienced in designing scalable APIs, implementing role-based access control, and building concurrency-safe backend architectures. Seeking Node.js backend or full-stack roles to work on production-grade systems.

TECHNICAL SKILLS

Programming: JavaScript, TypeScript, C, C++, Python, SQL
Backend: Node.js, Express.js, REST APIs, JWT Authentication, Socket.IO
Web: React.js, Next.js, HTML5, CSS3
Databases: MongoDB, PostgreSQL, Supabase
Tools: Git, GitHub, Swagger (OpenAPI), Azure, AWS, Linux (basic), Bash (basic)

EDUCATION

Bachelor of Technology (B.Tech) in Information Technology

Arya College of Engineering & IT, Jaipur, Rajasthan

2019 – 2023

EXPERIENCE

Junior Associate Engineer

Celebal Technologies, Jaipur, Rajasthan

Jul 2023 – Oct 2023

- Developed and maintained backend REST APIs using Node.js and Express with strong validation and error handling.
- Debugged backend failures by analyzing logs and improving service reliability and response times.
- Assisted in deployment and monitoring of backend services on Microsoft Azure.
- Built chatbot-based automation tools using Microsoft Bot Framework.

PROJECTS

Smart Appointment & Real-Time Queue Management System

2026

github.com/ashish8824/appointment-system-backend

- Built a scalable, multi-tenant Node.js backend powering a smart appointment and real-time queue management system, emphasizing data integrity, concurrency control, and modular architecture.
- Engineered a race-condition-safe real-time queue engine using atomic MongoDB operations and Socket.IO, ensuring consistent queue state synchronization across multiple clients.
- Implemented secure, role-based access control (JWT) with fine-grained permissions for customers, staff, and admins, alongside defensive state validation and centralized error handling.
- Automated and optimized operational workflows with background jobs, lifecycle state transitions, analytics APIs (wait time and queue metrics), and fully documented Swagger (OpenAPI 3.0) contracts.

BarterHub – Skill Exchange Platform

2025

github.com/ashish8824/bartarhub

- Developed backend services using Next.js and Supabase for authentication, messaging, and data storage.

- Designed scalable APIs with focus on real-time communication.

Josh – Personal Finance Dashboard

2025

github.com/ashish8824/josh-ai-assistant

- Built a backend-driven finance tracking system using TypeScript, REST APIs, and database queries.
- Integrated AI-based logic to generate automated financial insights.
